MAINTENANCE

A reactive approach to chiller service and maintenance, such as repairing the chiller only when breakdowns occur, significantly increases through-life costs due to premature component failure and inefficient energy use. Our experience demonstrates that regular planned preventative maintenance is essential to ensure efficient, trouble-free running of any chiller system. Reducing the quality and frequency of planned maintenance is a risky false economy so call us now to discover how surprisingly inexpensive a Chiller Planned Maintenance Agreement could be.

REPAIRS

No matter what your chiller is keeping cool - critical equipment, sensitive products or vital people - we know you demand reliability and rapid response from your chiller service provider, at a price that won't cost the earth. Andrews Air Conditioning will ensure that even if your systems go down, your business doesn't.

- Our Rapid Response chiller service is available 24/365 - in many cases we'll be on site in under 4 hours
- Our lines are staffed 24 hours a day - so you talk to a person, not a machine
- All repairs are carried out by our friendly, in-house, fully qualified chiller Service Technicians

We only ever fit original-quality parts, not cheaper imitations - and we have extensive expertise across a comprehensive range of chiller manufacturers so we'll have you up and running faster. For major repairs, we'll provide a rapid quotation - keeping you in control.

INSTALLATIONS

Andrews Air Conditioning Services is also developing a growing reputation in the selection and installation of energy-efficient chilled water systems. We understand that every project is unique so we will create a proposal and quotation covering everything you need - all completely free of charge and without obligation.

To give you even more peace of mind, our unique Climate Contingency Service combines regular chiller maintenance with pre-agreed rental equipment availability in the event of a sudden emergency.
